## Gusts

# Hazardous Weather

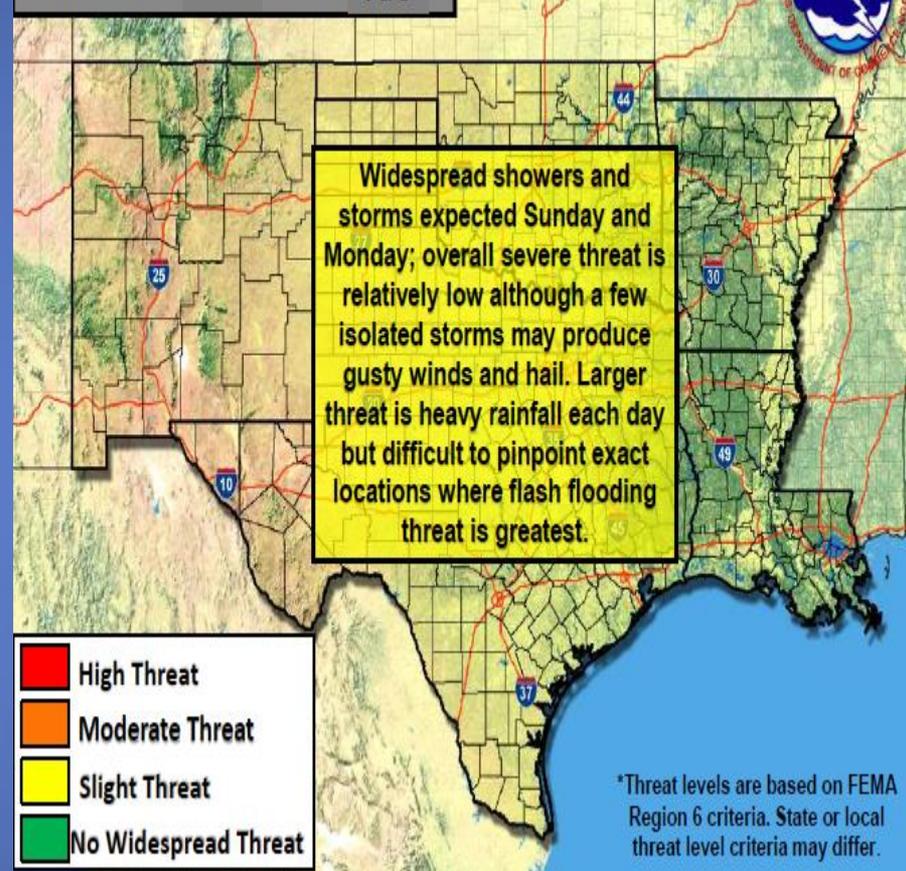

## Day 1 Weather Hazards

Valid: 0800 Sat - 0800 Sun

## Day 2-3 Weather Hazards

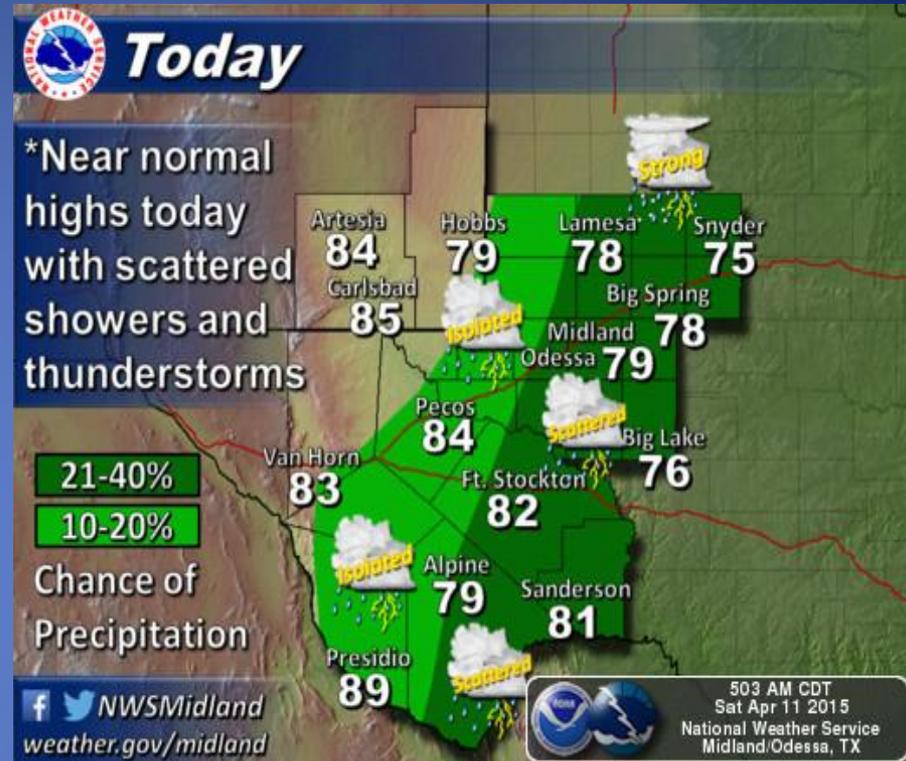

Valid: 0800 Sun - 0800 Tue

# Hazardous Weather

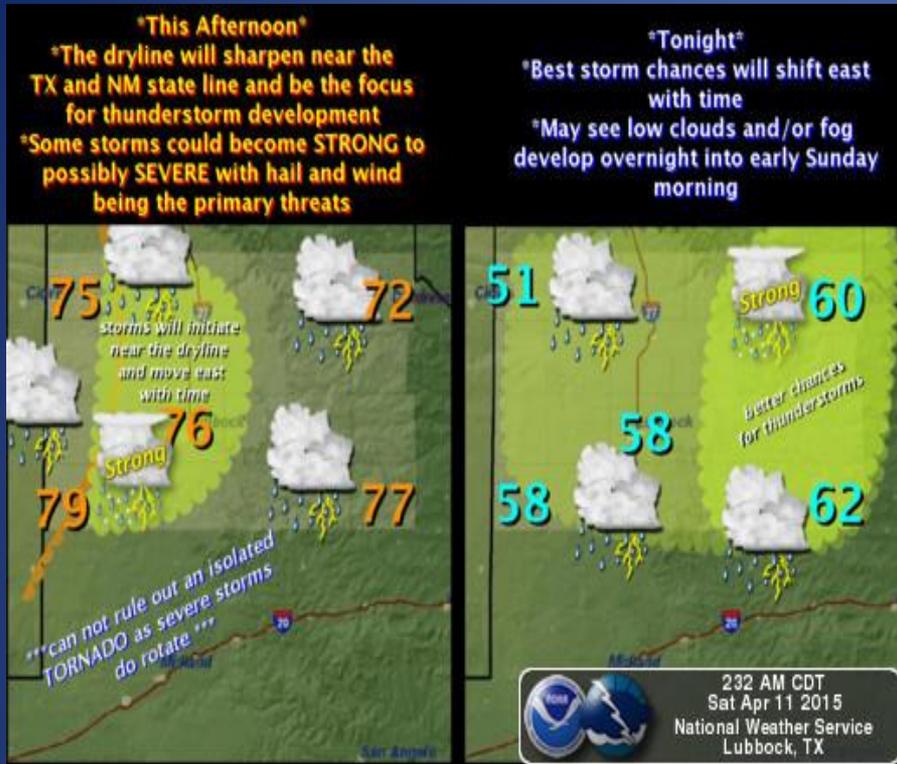

Dry southwest flow aloft will keep sunny skies over much of the area, with high temperatures about 5 to 7 degrees above normal. Residual low level moisture and instability will keep a slight chance of thunderstorms this afternoon over Hudspeth County.

Scattered showers and thunderstorms will be possible from the Permian Basin into the Big Bend region of Texas today. A few storms could be strong or marginally severe in the northeastern Permian Basin. Highs will be near normal.

# Hazardous Weather

The dryline (a boundary which separates dry air from moist air) will sharpen up near the TX and NM border this afternoon. This will be the focus for thunderstorm development, and the activity will shift eastward with time. Some of the storms will be capable of becoming strong to possibly severe, with hail and wind being the primary threats. However, an isolated tornado can not be ruled out as severe storms will be rotating aloft as well as near the surface. Stay abreast of the latest weather conditions by visiting our website!

## Severe Storms Possible

- Main timeframe for severe storms
  - 3 PM – 11 PM
- Primary Hazards
  - Large hail
  - Damaging wind gusts over 60 mph
  - Low threat of a tornado

After thunderstorms clear out this morning, there will be a lull and then thunderstorms are expected to develop again this afternoon. There will be a chance of severe thunderstorms across the panhandles this afternoon through this evening. Large hail and damaging winds will be the main threats. There is a low threat of a tornado.

# Hazardous Weather

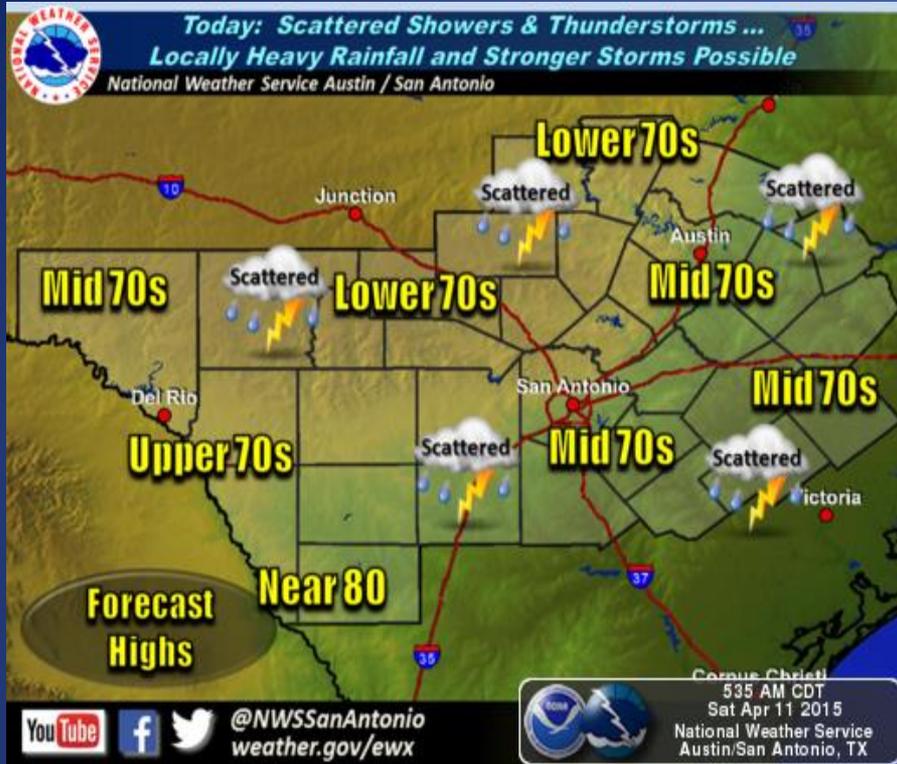

Today will be mostly cloudy with a chance of showers and thunderstorms. The best storm chances will reside across the southern portions of North Texas. Severe storms are not expected but cloud to ground lightning, locally heavy rainfall and gusty winds will be possible with any storm that develops. Afternoon highs will be in the 70s.

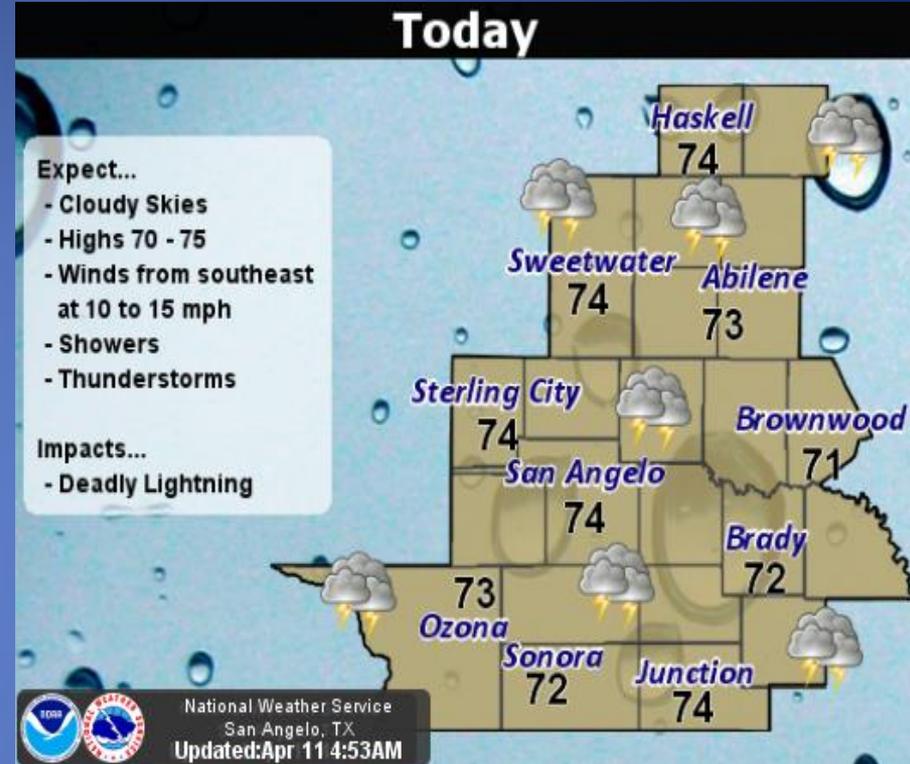

There is a very low chance that a few strong to marginally severe storms may make it into far western Oklahoma. Better chances will exist in the Texas and Oklahoma panhandles.

# Hazardous Weather

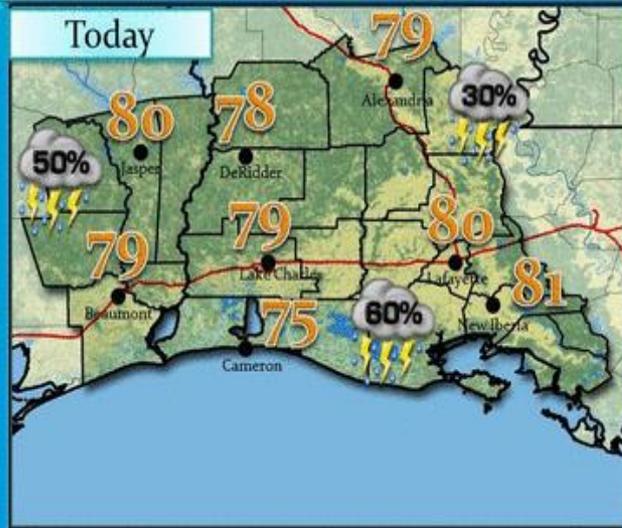

Scattered showers and thunderstorms will spread across all of South Central Texas today. Locally heavy rainfall is possible and may cause some isolated minor flooding. A few stronger storms are also possible with hail up to nickel size and wind gusts up to 50 mph the main threats. The most likely time for these impacts will be from midday through this evening. Otherwise, mostly cloudy skies will keep temperatures slightly below average with highs in the 70s to near 80.

Look for showers and thunderstorms today. Skies will be mostly cloudy to cloudy, and highs will be in the 70 to 75 range. The main weather hazard for today is deadly lightning.

# Hazardous Weather

Cloudy with storms developing through the day

Isolated showers in the morning with showers and thunderstorms during the afternoon into the evening hours.

Highs near 80s.

Wind east 6 to 10 mph.

Scattered to numerous showers and thunderstorms are in the forecast today, as a warm front moves north of the area. A few strong storms are expected, with an isolated brief severe storm not out of the question. Highs today will range from the mid to upper 70s over the Coastal Plains, and upper 70s to around 80 over the Brush Country.
